

**Created:** *May-04-2021 01:24:33 PM +UTC*

**Transaction URL:** <https://bscscan.com/tx/0x5dad805e72f56edeacea57300d90541f4f0ee0416329971715c9b6785090e65>

**Supply Count:** *1,800,000 total (9 Decimals)*

**Blockchain Platform:** *Binance*

At this point there weren't many blockchain platforms available for token creation; The Binance smart chain and the Ethereum networks. Ethereum gas prices are unreasonable for daily business transactions so I picked the Binance blockchain platform.

**10% Total Transaction Slippage:** *every transaction*

**Holder Split Fee:** *5%*

5% of every transaction is redistributed proportionally between all current holder wallets. Automatic LP across all exchanges included in holder split secures the volume of Home Safe (000) tokens along with exchange pairing option availability.

**Automatic LP Fee:** *5%*

5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the Home Safe (000) tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on PancakeSwap securing the volume of Home Safe (000) for the future.

**Transaction Maximum:** *900*

With a maximum count of 1.8 million Home Safe (000) tokens 900 is .05 percent of the total supply. By limiting the individual transaction maximum to .05 percent of the total supply one transaction cannot create change larger than .05 percent in price.

**Blockchain Technology:**

*Decentralized Exchanges:* [PancakeSwap](#), [ApeSwap](#), [BabySwap](#)

**Exchange Pairing Options:**

BNB / BUSD / COG / USDT

**Audits:**
